Data Model & Project Timeline

A full-stack SaaS platform for local grocery & pharmacy digitization

Figure 1	Conceptual ER Diagram	Entities & relationships
Figure 2	Logical ER Diagram	Keys & junction tables
Figure 3	Physical ER Diagram	Attributes & data types
Figure 4	Project Gantt Chart	Development timeline (C++ / Python / TypeScript)

Figure 1 — Conceptual ER Diagram (Level 1)

Entities and how they relate — no keys or attributes, the high-level map of the system.

Figure 2 — Logical ER Diagram (Level 2)

Adds primary/foreign keys and the junction tables (cart, order items, delivery assignment) needed to implement the relationships.

Figure 3 — Physical ER Diagram (Level 3)

Full column definitions with data types — the schema ready to translate into CREATE TABLE statements.

Figure 4 — Project Gantt Chart

Development timeline split across the three languages in use: C++ for the core backend, Python for routing and background jobs, and TypeScript for the frontend portals.
