

VendorFlow

Platform Prototype Overview

Connecting Local Shops with the Community

What We Have Built (Overview)

- Developed a complete, responsive frontend MVP. Engineered two distinct experiences: Customer Marketplace & Vendor Dashboard.

Focused on modern, trustworthy UI/UX using brand colors (Green & Charcoal).

Included smooth micro-interactions to make it feel like a real startup product.

Customer Flow Implementation

1. Home Page: Category browsing and local shop discovery.Shop Details:

Individual product listings with dynamic quantity controls.

Shopping Cart: Persistent cart that calculates totals and delivery fees.

Checkout & Orders: Form validation leading to an animated success sequence and history tracking.

Vendor Flow Implementation

1. Onboarding: Multi-step animated sequence (Details, Owner, Operations). Dashboard: High-level statistical cards and layout for managing operations.

Order Management: Interface to immediately change customer order statuses.

Analytics: Beautiful simulated CSS-based bar charts visualizing sales data.

How We Built It (Technology Stack)

- Framework: Next.js 14 (App Router) for scalable, fast routing. Styling: Tailwind CSS for rapid, consistent, and responsive design.
- Interactivity: Framer Motion for animations & Lucide React for icons.
- Data/State: React Context API + LocalStorage to simulate a real-time database.
